

Composite Score Formula

$$Composite = 0.30(CarbonFootprint) + 0.25(Nutrition) + 0.15(WaterUse) + 0.10(LandUse) + 0.10(BiodiversityScore) + 0.10(AffordabilityScore)$$

Carbon Footprint

Status: Mapped in mapped-data

Contribution Percent: 30%

@TASK: Pending review of assigned codes

Nutrition

Status: NOT MAPPED (data missing)

Contribution Percent: 25%

@TASK: Figure out how we're going to calculate this metric, then map it

Water Use

Status: Mapped in mapped-data

Contribution Percent: 15%

@TASK: Pending review of assigned codes

Land Use

Status: Mapped in mapped-data

Contribution Percent: 10%

@TASK: Pending review of assigned codes

Biodiversity

Status: NOT MAPPED (data missing)

Contribution Percent: 10%

@TASK: Use Frankie's "Creating a Biodiversity Score" document with "Bio-FoodComp 4.0" to generate biodiversity scores and map them

Affordability

Status: Mapped (this is the basis for coding the rest of the categories)

Contribution Percent: 10%

@TASK: Ensure that other data using this as a basis is reflective and accurately coded
